New vectors comprising operably linked DNA fragments having an origin of replication, a selectable marker and a chimeric DNA construct, useful for silencing target nucleic acids and for producing large amounts of doublestranded RNA.

Claim 15; Page 74-83; 104pp; English.

The present invention describes a vector (I) comprising operably linked DNA fragments having: (a) origin of replication allowing replication in a recipient cell, preferably in bacteria with a Bacherichia coli, (b) selectable marker region capable of being expressed in the recipient cell; and (c) a chimeric DNA construct comprising: (i) promoter or promoter region capable of being recognized by RNA polymerases of a eukaryotic cell or by prokaryotic RNA polymerase; (ii) first, second, third and fourth recombination sites, (iii) 3' transcription terminating and polyadenylation region functional in the eukaryotic cell. The first and

Wed May 12 08:21:01 2004

fourth recombination sites, or the second and third recombination sites are capable of reacting with a same recombination site, and preferably are identical. The first and second recombination sites, or the third and fourth recombination sites, do not recombine with each other or with a same recombination site. The vector is useful for producing large amounts of double-stranded RNA which can be used for silencing target nucleic acid sequences. The vectors can also be used to convert a DNA fragment into an inverted repeat structure. Plants transformed with a vector from the present invention can be used in a conventional breeding scheme to chimeric gene for reduction of the phenotypic expression of nucleic acids. The present sequence represents an acceptor vector nucleotide sequence from the present invention

fourth recombination sites; (iii) 3' transcription terminating and polyadenylation region functional in the eukaryotic cell. The first and fourth recombination sites, or the second and third recombination sites.

The fracting with a same recombination site, and preferably are identical. The first and second recombination site, or the third and fourth recombination sites, do not recombination sites, or the third and same recombination site. The vector is useful for producing large amounts of double-stranded RNA which can be used for silencing target nucleic acid sequences. The vectors an also be used to convert a DNA fragment into an inverted repeat structure. Plants transformed with a vector from the present invention can be used in a conventional breeding scheme to produce more plants with the same characteristics or to introduce a chimeric gene for reduction of the phenotypic expression of nucleic acids. The present sequence represents an acceptor vector nucleotide

sequence from the present invention

The present invention describes a vector (I) comprising operably linked DNA fragments having: (a) origin of replication allowing replication in a recipient cell, preferably in bacteria such as Bscherichia coli; (b) selectable marker region capable of being expressed in the recipient cell; and (c) a chimeric DNA construct comprising: (i) promoter or promoter region capable of being recognized by RNA polymerases of a eukaryotic cell or by prokaryotic RNA polymerase; (ii) first, second, third and

New vectors comprising operably linked DNA fragments having an origin of replication, a selectable marker and a chimeric DNA construct, useful for silencing target nucleic acids and for producing large amounts of double-

region capable of being recognized by RNA polymerases of a eukaryotic cell or by prokaryotic RNA polymerase; (ii) first, second, third and coll or by prokaryotic RNA polymerase; (ii) first, second, third and coll or by prokaryotic RNA polymerase; (iii) 3' transcription terminating and polyademylation region functional in the eukaryotic cell. The first and tecombination sites, or the second and third recombination sites and second recombination sites, and preferably are identical. The first and second recombination sites, or the third and fourth recombination sites, do not recombine with each other or with a same recombination site. The vector is useful for producing large amounts of double-stranded RNA which can be used to convert a DNA fragment into an inverted repeat structure. Plants transformed with a vector from the present invention can be used in a conventional breeding scheme to produce more plants with the same characteristics or to introduce a chimeric gene for reduction of the phenotypic expression of nucleic and acids. The present sequence represents an acceptor vector nucleotide sequence from the present invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DP
```

The present invention describes a vector (1) comprising operably linked DNA fragments having: (a) origin of replication allowing replication in a cecipient cell, preferably in bacteria such as Bacherichia coll; (b) selectable marker region capable of being expressed in the recipient cell cand (c) a chimeric DNA construct comprising: (i) promoter or promoter region dapable of being recognized by RNA polymerases of a eukaryotic cell or by prokaryotic RNA polymerase; (ii) first, second, third and fourth recombination sites; (iii) 3' transcription terminating and collydealylation region functional in the eukaryotic cell. The first and fourth recombination sites, or the second and third recombination sites, or the second and third recombination sites, or the second in the complimation sites or the third and fourth recombination sites, do not recombination site, or the third and control fourth recombination sites, may be used for silencing large amounts of double-stranded RNA which can be used for silencing target nucleic cald sequences. The vectors can also be used to convert a DNA fragment into an inverted repeat structure. Plants transformed with a vector from the present invention of the phenotypic expression of nucleotide chimeric gene for reduction of the phenotypic expression of nucleotide sequence from the present invention

New vectors comprising operably linked DNA fragments having an origin of replication, a selectable marker and a chimeric DNA construct, useful for replication, a selectable marker and a chimeric DNA construct, useful for replication, a selectable marker and a chimeric DNA construct, useful for silencing target nucleic acids and for producing large amounts of double-region to the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the present invention sites, do not recombination sites, or the third and same recombination sites, do not recombine with each other or with a same recombination site, and preferry of the present invention can be used for silencing target nucleic confidering of the present invention of the phenotypic expression of nucleic confidering of the present invention of the phenotypic expression of nucleic sequence from the present invention of the phenotypic expression of nucleic sequence from the present invention of the phenotypic expression of nucleic sequence consulation.

The present invention describes a vector (I) comprising operably linked DNA fragments having: (a) origin of replication allowing replication in a recipient cell, preferably in bacteria such as Bacherichia coll; (b) selectable marker region capable of being expressed in the recipient cell c; and (c) a chimeric DNA construct comprising: (i) promoter or promoter region capable of being recognized by RNA polymerases of a eukaryotic cell or by prokaryotic RNA polymerase; (ii) first, second, third and fourth recombination sites, (iii) 3' transcription terminating and courth recombination sites, or the second and third recombination sites are capable of reacting with a same recombination site, and preferably are identical. The first and second recombination sites, or the third and same recombination sites, do not recombination site, and preferably are same recombination sites, do not recombination site, or the third and same recombination sites and second recombination site or with each other or with a same recombination site.

Of double-stranded RNA which can be used for silencing target nucleic and sequences. The vectors can also be used to convert a DNA fragment from a silence of second silence of some and second second with a same recombination site of some silence of second silence of second silence of second silence of second silence of second silence of second silence of second silence of second silence of second silence of second silence of second silence of second silence of second silence of second silence of second silence of second silence of second silence of second silence of second silence of second silence of second silence of second silence of second silence of second silence of second silence of second silence of second silence of second silence of second silence of second silence of second silence of second silence of second silence of second silence of second silence of second silence of second silence of second silence of second silence of second silence of second silence of second silence of seco
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  16644 ATATTAAATTAGATTTTGCATAAAAACAGACTACATAATACTGTAAAACACACAACATATC 16585

Also described are: (I) an isolated nucleic acid molecule (II) comprising one or more attraceombination sites comprising at least one mutation in its core region that increases the specificity of interaction between the recombination site and a second attraceombination site; and (2) an isolated nucleic acid molecule (III)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Bacteriophage lambda; att; recombination site; attB; attB; attL; attL; mutant; recombinational cloning; entry vector; destination vector; gene product targeting; fusion tag cleavage; ds.

attP2,

```
comprising one or more mutated att recombination sites comprising at least one mutation in its core region that enhances the efficiency of recombination between a first nucleic acid molecule comprising the mutated att recombination site and a second nucleic acid molecule comprising a second recombination site that interacts with the mutated att recombination site. [1], [11], [11], primers, vectors and methods att recombination site. [1], [11], primers, vectors and methods att recombination site. [1], [11], primers, vectors and methods curve to intracellular locations, cleaving fusion tays from gene products to intracellular locations, cleaving fusion tays from desired proteins, operably linking nucleic acid molecules of interest to regulatory genetic sequences, constructing genes for fusion proteins, changing copy number, changing replicons, cloning into phages and cloning. [1], [11], [11], host cells and vectors can be used in the production of polypeptides and antibodiaes. The present sequence is used in the exemplification of the present invention

The invention relates to inserting a population of nucleic acids into a second target molecule. The method involves (a) mixing a first population of nucleic acid comprising one or more recombination sites with a target nucleic acid, (b) causing some or all of the nucleic acid molecules of the first population to recombine with the first target nucleic acid molecules of nucleic acid with a second population; (c) mixing the second population of nucleic acid with a second target nucleic acid, causing some or all of the nucleic acid molecules of the second population to recombine with some or all of the second target nucleic acid molecules to form a third population of nucleic acid. The method is useful for selecting and isolating nucleic acid molecules. The present sequence represents the destination plasmid pDONR201 nucleotide sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Moving an insert nucleic acid between vectors using site-specific recombination in vivo, useful for studying the biology of the organism, including array construction, reporter gene fusions, mutagenesis and protein production.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention comprises a method for moving an insert nucleic acid molecule between vectors, the method involves moving an insert nucleic acid from one vector to another using site-specific recombination. The method of the invention is useful for studying the biology of an organism, including array construction, reporter gene fusions, mutagenesis, protein production and characterisation. The present DNA sequence represents the plasmid vector pMK2010 of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            <u>AAATTAGATTTTGCATAAAAAACAGACTACATAATACTGTAAAACACAAACATATCCAGTC</u>

conciding an attB1, attB2, attB1, attB2, attB1, and attB2 nucleotide sequence. Also described are: (1) an isolated nucleic acid nucleotide sequence. Also described are: (1) an isolated nucleic acid nucleotide sequence. Also described are: (1) an isolated nucleic acid nucleotide sequence. Also described are: (1) an isolated nucleic acid nucleotide combination sites and (2) an isolated nucleic acid molecule (III) remorphishing at the recombination site, and (2) an isolated nucleic acid molecule (III) comprising one or more mutated at recombination sites comprising at least one mutation between a first nucleic acid molecule comprising one or more mutated at recombination site and a second nucleic acid molecule comprising at ecombination site and a second nucleic acid molecule comprising a second recombination site that interacts with the mutated att recombination site and a second nucleic acid molecules for the recombination of the present invention are used for the recombinational cloning of act recombination are used for the recombinational cloning of act molecules of intracellular locations, cleaving fusion tags from central proteins, operably linking nucleic acid molecules of interest to regulatory genetic sequences, constructing genes for fusion proteins, changing replicons, cloning into phages and cloning (1), (II), (III), host cells and vectors can be used in the production of polypeptides and antibodies. The present sequence is used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     3696 AATTAGATTTTGCATAAAAACAGACTACATAATACTGTAAAACACAACATATCCAGTC 3755
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Isolated nucleic acid molecules encoding an attB1, attB2, attB2, attL1, attL2, attL2, attR1 nucleotide sequence useful for the recombinational cloning of polypeptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    3636 GCCAACTITGTACAAAAAGCTGAACGAGAACGTAAAATGATATAAATATCAATATATT

comprising one or more mutated att recombination sites comprising at least one mutated att recombination sites; and (2) an isolated mucleic acid molecula (III) comprising one or more mutated att recombination sites comprising at least one mutated att recombination in its core region that enhances the efficiency of recombination between a first nucleic acid molecule comprising the mutated att recombination site and a second nucleic acid molecule comprising a second recombination site that interacts with the mutated att recombination site. (I), (III), (III), primers, vectors and methods attrement invention are used for the recombinational cloning of nucleic acid molecules. They can be used for changing vectors, targeting generated proteins, operably linking mucleic acid molecules of interest to regulatory genetic sequences, constructing genes for fusion proteins, changing copy number, changing replicons, cloning into phages and cloning (III), (III), host cells and vectors can be used in the production of polypeptides and antibodies. The present sequence is used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               5424

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      206 TGTTCTTCGGGTGATGCTGCCAACTTAGTCGACCGACAGCCTTCCAAATGTTCTTCTCAA 265
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes isolated nucleic acid molecules (I) encoding an attB1, attB2, attB1, attB2, attL1, attB2, attB1, and attR2 nucleotide sequence. Also described are: (I) an isolated nucleic acid molecule (II) comprising one or more att recombination sites comprising at least one mutation in its ore region that increases the specificity of interaction between the recombination site and a second att

The invention relates to inserting a population of nucleic acids into a second target molecule. The method involves (a) mixing a first population of nucleic acid comprising one or more recombination sites with a target nucleic acid, (b) causing some or all of the nucleic acid molecules of the first population to recombine with the first target nucleic acid molecules of nucleic acid with a second population, (c) mixing the second population of all of the nucleic acid molecules of the second population to recombine with some or all of the second target nucleic acid molecules of the second population to form a third population of nucleic acid. The method is useful for selecting and isolating nucleic acid molecules.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ATTCATATACGCTAGTGTCATAGTCCTGAAAATCATCTGCATCAAGAACAATTTCACAAC 445

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1358
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1418
                                                                                                                                                                                    The invention relates to inserting a population of nucleic acids into a second target molecule. The method involves (a) mixing a first population of nucleic acid comprising one or more recombination sites with a target nucleic acid, comprising one or more recombination sites with a target the first population to recombine with the first target nucleic acid molecules of nucleic acid molecules of nucleic acid molecules of nucleic acid molecules of nucleic acid with a second population; (c) mixing the second population of nucleic acid molecules of the second population to recombine with some or all of the second target nucleic acid molecules to form a third population of nucleic acid. The method is useful for selecting and isolating nucleic acid molecules. The present sequence represents the destination plasmid pDONR212 nucleotide sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        325
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             385

```
the first population to recombine with the first target nucleic acid molecules to form a second population; (c) mixing the second population of nucleic acid with a second target nucleic acid; and (d) causing some or all of the nucleic acid molecules of the second population to recombine with some or all of the second target nucleic acid molecules to form a third population of nucleic acid. The method is useful for selecting and isolating nucleic acid molecules. The present sequence represents the destination plasmid pDONR212(F) nucleotide sequence
                                                                                                                                                                                                                                                                                                                                                                                                                              TGTTCTTCGGGTGATGCTGCCAACTTAGTCGACCGACAGCCTTCCAAATGTTCTTCTCAA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to inserting a population of nucleic acids into a second target molecule. The method involves (a) mixing a first population of nucleic acid comprising one or more recombination sites with a target nucleic acid; (b) causing some or all of the nucleic acid molecules of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             for
